Assignment 1 Submission Instructions

1. Google Colab Submission

Upload your notebook to Google Colab and ensure it runs correctly.

Steps:
1. Upload your .ipynb file to Google Colab.
2. Run all cells to confirm that the notebook executes without errors.
3. Generate a shareable link and set access to 'Anyone with the link'.
4. Include the Colab link at the beginning of your notebook.

Important:
- The notebook must run without modification.
- Do not rely on local file paths or manual uploads.
- Ensure all required data is accessible.

2. Converting Notebook to PDF (LaTeX Method)

Hand-Written solutions are not accepted. Please provide all answers and mathematical derivations using LaTeX within Markdown cells in your notebook.

To convert your notebook into a PDF, you need to install Pandoc and a LaTeX distribution.

Steps:
1. Install Pandoc.
2. Install a LaTeX distribution (including XeLaTeX).
3. Install additional LaTeX packages if prompted.
4. Convert your notebook to PDF. (File -> Download as -> PDF via LaTeX(.pdf))

Important:
- If section numbering appears incorrect (e.g., 0.0.1), add the following setting at the beginning of your notebook:
  $$ \setcounter{secnumdepth}{0} $$
- Follow any error messages to install missing packages.

3. Alternative PDF Method (Print)

If the LaTeX method does not work, you may use the print function.

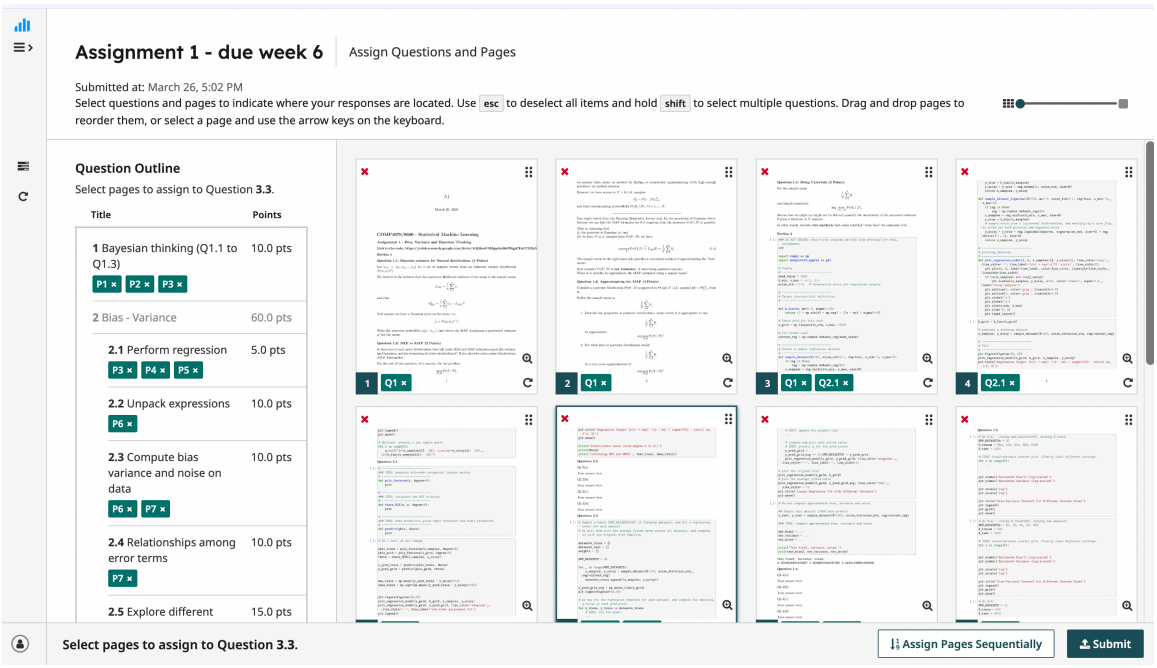
Steps:
1. Open your notebook.

2. Use Print Preview.
3. Save as PDF.

Note:
- This method is simpler but formatting may be less precise.

4. Submission to Gradescope

Steps:
1. Upload your PDF file to Gradescope.
2. Ensure answers are clearly labeled according to question numbers.



Important:
- Marking is based on question numbers.
- Make sure answers match each question clearly. **We won't grade your answers if they are in the wrong section.**

Final Checklist

- Notebook runs on Colab
- Colab link is included and accessible
- PDF generated correctly
- Answers sections clearly labeled
